Soyamo Vakala

Johannesburg, South Africa | 065-938-6561 | lloydsoyamo@gmail.com | linkedin.com/in/svakala | github.com/Soyamo

Professional Summary

Computer Science Honours graduate with a DevSecOps focus, experienced in building RESTful APIs, CI/CD pipelines, and database-driven systems using Python, C#, Java, ASP.NET Core, and Docker. Integrates security practices throughout the development lifecycle and is expanding into AWS cloud operations. Self-motivated and adaptive team player.

Education

University Of Johannesburg — Johannesburg, South Africa
Bachelor of Science Hons. in Computer Science — *Feb. 2025 – Nov 2025*

North-West University — Potchefstroom, South Africa
Bachelor of Science in Information Technology — *Feb. 2022 – Nov 2024*

Projects & Experience

DeepGuard Detection System | *Python, Flask, SQLite, Git, TensorFlow, Google Colab* — Feb 2025 – Present

- Developed an AI-powered web application for image and video deepfake detection
- Implemented secure authentication, admin controls, and detection history tracking
- Trained CNN, LSTM, and Transformer models achieving 92% detection accuracy.
- Integrated real-time frame-by-frame heatmaps for visual explainability

Transaction Anomaly Tracker | *Python, Flask, MySQL, Docker, Gitlab, Google Cloud* — Aug 2025 – Oct 2025

- Built a full-stack transaction monitoring system with complete CRUD functionality for anomaly and fraud detection.
- Designed and automated a CI/CD pipeline covering testing, containerisation, and security scanning.
- Deployed to Google Cloud Run via Artifact Registry, reducing deployment time by 65%

Museum Ticket System | *C#, ASP.NET, MySQL* — Feb 2023 – Nov 2023

- Built a C#.NET ticketing application for managing museum visitors and ticket sales, implementing CRUD operations and SQL database integration.
- Designed a normalised SQL Server database schema with referential integrity constraints.
- Developed a Windows Forms front-end with input validation, error handling, and user-friendly interface

Starlight Hotel Database | *Oracle SQL Developer* — Aug 2024 – Nov 2024

- Designed a relational database system to manage hotel operations including reservations, guests, and rooms.
- Applied complete Database Lifecycle (DBLC) methodology from requirements analysis through deployment
- Normalised database to 3NF; optimised query performance through strategic indexing, reducing average query time by 40%

Technical Skills

Languages: Java, Python, C#, SQL, JavaScript, HTML/CSS
Frameworks: ASP.NET, Flask, FastAPI
Cloud & DevOps: Google Cloud Run, Artifact Registry, Docker, CI/CD, AWS (self-study)
AI / ML Libraries: TensorFlow, CNNs, LSTMs, Transformers
Developer Tools: GitLab, GitHub, VS Code, Visual Studio, Eclipse, Google Colab
Database: MySQL, SQLite, Oracle SQL, SQL Server
Soft Skills: Team collaboration, problem-solving, communication, attention to detail, critical thinking
